Use **local alignment** (BLAST) when:

- **Searching** databases for biologically related sequences

```
Human  catggccctgtggatgcgccctctgccctgctggcgctgctggccc
        ||| | | | | | | | | | | | | | | | | | | | | | | |
Mouse  catggccctgtggatgcgcttcctgccctgctggccctgctcttcc
```

- Analyzing **multidomain** proteins

Use **multiple alignment** (CLUSTALW, etc) when:

- Aligning several members of a protein family (soon...)

P1	GLGI	EI	IGTL	QLVL	CVL	ATT	DR	.	RRR	DL	GG
P2	AVTV	EL	FLTM	QLVL	CIF	AST	DE	.	RRG	DN	LG
P3	GFFD	QFI	GTAA	LIVC	VLA	IVD	PY	NN	PV	PR	RG
P4	GLLV	EL	IITF	QLVF	TIFA	SC	DS	.	KRT	DV	TG

P1	S	A	P	L
P2	S	P	A	L
P3	L	E	A	F
P4	S	V	A	L

BLAST =

Basic:

Local: versus global. BLAST align fragments of query

Alignment: like, uh, why we're here

Search: BLAST aligns your query against large database,
looks for best alignments

Tool:

When do we use BLAST?

- Find homologues (orthologs & paralogs)
- Find other proteins with conserved domains
- Find repeating domains in same protein (like a dotplot)

Practical
BLASTing

Protein searches

Types of BLAST

E-value

Key steps

Summary

Reading for
next class

- Blast can search by DNA or translated amino acid sequence.

- **Protein searching is usually better**

- Deep question: Why?

Hint 1: Think about genetic code and degeneracy

Hint 2: Think about substitution matrices and amino acid properties

Hint 3: Think about evolution of DNA sequences

- When would you use a DNA BLAST search instead?

Summary

Reading for
next class

Type	Query	Database	Remarks
blastn	DNA	DNA	
blastp	protein	protein	
blastx	DNA	protein	Tries all 6 reading frames in DNA query
tblastn	protein	DNA	Tries all 6 DNA reading frames in database
tblastx	DNA	DNA	All $6 \times 6 = 36$ combinations of reading frames (slow!!)

When would you use each of these?

Things we'll try:

- 1 Get BLAST help
- 2 Simple protein blast against NR database
(NP_001612 aryl hydrocarbon receptor)
- 3 Look at taxonomy results
- 4 Look at main results table & E-values
 - Click on **Description** column to see actual alignment
 - Click on **Accession** to see BLAST hit in GenBank
- 5 Examine E-values and bit scores
- 6 Edit and resubmit BLAST parameters

③ Summary

④ Reading for next class

How do we evaluate a BLAST hit?

			E-value	
sp P32871 P11A	BOVIN	PHOSPHATIDYLINOSITOL 3-KINASE CATALYT...	680	0.0
sp P42336 P11A	HUMAN	PHOSPHATIDYLINOSITOL 3-KINASE CATALYT...	676	0.0
sp P42337 P11A	MOUSE	PHOSPHATIDYLINOSITOL 3-KINASE CATALYT...	674	0.0
sp P42338 P11B	HUMAN	PHOSPHATIDYLINOSITOL 3-KINASE CATALYT...	338	9e-93
sp O35904 P11D	MOUSE	PHOSPHATIDYLINOSITOL 3-KINASE CATALYT...	332	7e-91
sp O00329 P11D	HUMAN	PHOSPHATIDYLINOSITOL 3-KINASE CATALYT...	331	2e-90
sp P47473 RIR1	MYCGE	RIBONUCLEOSIDE-DIPHOSPHATE REDUCTASE A...	34	0.59

Definition: E-value

The number of hits we'd expect by chance.

Small E-value → unlikely by chance → likely homology

Example: Database with 1000 DNA sequences:

Query	E-value
T	~ 1000
TA	fewer
TACCGATGTTGGACGTATTAGCTTAGGAC	~ 0

Summary

Reading for
next class

Slightly simplified but shows the key idea:

$$E = m \times n \times 2^{-S}$$

Where:

E expected number of hits

m database size

n query size

S alignment score

S	2^{-S}
1	0.5
5	0.03
10	0.001
50	9×10^{-16}
100	8×10^{-31}

Key idea:

High alignment score \rightarrow small E value

the best scores are:

							E(86391)
SW:P11A	BOVIN	P32871	PHOSPHATIDYLINOSITOL 3-KINAS	(1068)	2228	493	1.2e-138
SW:P11A	HUMAN	P42336	PHOSPHATIDYLINOSITOL 3-KINAS	(1068)	2216	490	7.4e-138
SW:P11A	MOUSE	P42337	PHOSPHATIDYLINOSITOL 3-KINAS	(1068)	2204	488	4.5e-137
SW:P11B	HUMAN	P42338	PHOSPHATIDYLINOSITOL 3-KINAS	(1070)	1126	254	1.1e-66

SW:ESR1	YEAST	P38111	ESR1 PROTEIN.	(2368)	144	41	0.028
SW:PRA2	USTMA	P31303	PHEROMONE RECEPTOR 2.	(346)	116	35	0.35
SW:TEL1	YEAST	P38110	TELOMER LENGTH REGULATION PR	(2787)	127	37	0.42
SW:YA51	METJA	Q58451	HYPOTHETICAL PROTEIN MJ1051.	(513)	112	34	0.91
SW:RIR1	MYCGE	P47473	RIBONUCLEOSIDE-DIPHOSPHATE R	(721)	106	33	3
SW:YAY1	SCHPO	Q10209	HYPOTHETICAL 44.8 KDA PROTEI	(392)	99	31	5.1

④ Reading for next class

- 1 Choose a BLAST program (blastp, blastn, etc)
- 2 Enter the DNA or protein sequence
- 3 Choose a database
 - nr = non-redundant, default, not as good as RefSeq,
 - RefSeq
 - others
- 4 Adjust parameters (if necessary)
- 5 BLAST
- 6 Evaluate results (low E-values)
- 7 *Think like a biologist:*
Follow interesting leads to PubMed, OMIM, ...

Low-complexity regions cause false hits
